(a)
M0: routine characteristics
M1: M0 + two diet questions
M2: M1 + activity and social support
PHQ-2 ranking
PHQ-2 ≥ 3 rule
Random selection
Perfect ranking (population-level upper bound)
Perfect ranking within folds
Plateau: 1,000 × p = 45.7
PHQ-2 ≥ 3 (c = 5.6%)
10%
20%
30%
PHQ-8–positive adults selected per 1,000 eligible adults
Assessment capacity, % of eligible adults invited
(b)
Δ(0.20) = 0.61 (−0.89 to 2.23)
Difference in detection yield, M1 − M0 (per 1,000 eligible adults)
±1 per 1,000 (practical-importance bound)
Pointwise 95% bootstrap CI
Δ(c) = D_M1(c) − D_M0(c)
Assessment capacity, % of eligible adults invited
